Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name: Yoga Madha A
Course Code: MLA0405
Course Name: Deep Learning
Course Faculty: Dr. A.M.Arul Raj

Reg. No.:192425058
Slot: D

Project Title: A Deep Convolutional Neural Network -Based Approach For Signature Forgery Detection In Documents		
Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)		
Review 1 Image	Review 2 Image	Module Image
Student Contribution Module Work - Title		Demo Image
Module 2:Forensic Analysis & Verification Dashboard		
Project Description: (here you write what you did in this project (contribution) including Model Description)		
This project develops an AI-based signature forgery detection system using a Deep Convolutional Neural Network (DCNN). The project also provides confidence scores, genuine and forged probabilities, risk assessment, heatmap visualization, forgery analysis scorecard, feature radar chart, AI-based explanation, signature comparison, verification history, and professional PDF report generation. The main contribution includes developing the signature processing and DCNN detection module and the forensic analysis and verification dashboard. The system is implemented using Python, TensorFlow/Keras, OpenCV, Flask, HTML, CSS and JavaScript. The DCNN learns important visual characteristics such as strokes, shapes and patterns from genuine and forged signature samples and uses these features for classification.
